

ASTRATEQ ZERO-CLOUD PRIVACY MANIFESTO

A New Standard for Vehicle Intelligence Ownership - reports.astrateggadgets.com

Our Decentralized Edge Computing Safety Paradigm Statement

Privacy Classification: PIPEDA & Quebec Law 25 Compliant

Telemetry Blueprint: Absolute Ephemeral Memory Isolation

Cryptographic Protocol: Local Offline Verification Only

Vehicular automation and intelligent computer vision should never result in persistent corporate surveillance. At Astrateq Gadgets, we build systems under a strict mandate: all data, including sensor grids, OBD metrics, GPS vectors, and lane-prediction inference weights, MUST stay resident on-device inside your physical car boundary.

Core Technical Directives:

- On-Device Transformer Weights: Zero external API calls during active operation**
- Pedestrian & Plate Obfuscation: Local hardware-layer blurring**
- Decoupled Networks: Wireless diagnostic chips can be physically disconnected**
